

# PRESS RELEASE

## **Pressed parts in rapid timescales prove real hit for ARRK customers!**

Leading rapid prototyping company, ARRK Product Development Ltd, continues to develop its range of rapid prototyping services and is pleased to report that its newly launched Metal Pressing service is proving to be a real hit with customers.

“What makes this service so popular is that not only can we deliver high quality pressed parts in a variety of materials and thicknesses but we can deliver them in such short timescales, much to the amazement our customers”, comments ARRK’s RP Managing Director Craig Vickers. “Complimenting our rapid prototyping culture whereby parts can be delivered in two to three days, our metal pressing service can deliver pressed parts in less than two weeks with no expensive tooling involved.”

What’s more ARRK’s extensive capacity means it can support the most demanding of projects. With a range of metals and thicknesses to choose from ARRK is able to offer clients anything from a few parts to hundreds of parts. The service offers everything from punching, stamping, drilling, insert pinning and embossing right through to a range of surface finishing options.
